

Cordless infrared heating pillow

Direct contact warmth from two infrared panels at the front. The rectangular shape is comfortable for targeted warmth around the lower back, neck, belly or lap. The soft chenille upholstery fabric feels comfortable and has a refined texture.

SIZE	approx. 50 x 30 cm
HEAT	2 front panels - 3 settings
POWER	5V USB - minimum 2A
CABLE	integrated - approx. 2.5 m

Before use: check the pillow, button, cable, USB plug and any power bank for damage, moisture or discoloration.

Quick start

Use the pillow only when clean, dry and undamaged.

1 Choose your power source

Use a suitable 5V power bank with at least 2A, or connect the integrated cable to a suitable USB port or 5V adapter.

2 Connect

Insert the USB-A plug fully into the power bank output, USB port or adapter. Place a power bank in the pocket at the back.

3 Switch on

Press and hold the button for about 2 to 3 seconds. Then press briefly to cycle through the three heat settings.

4 Use the front

Preheat for 5 to 10 minutes. Lean directly against the front with the button for the clearest contact warmth.

Heat settings and estimated operating time

Guidelines with a fully charged Warmpi 10,000 mAh power bank; cold, contact and battery condition affect operating time.

RED

approx. 60 °C

up to approx. 3.5 h

BLUE

approx. 50 °C

up to approx. 5 h

GREEN

approx. 40 °C

up to approx. 6 h

Important about the warmth: temperatures refer to the heating element. Chenille upholstery fabric distributes the warmth, so the outside may feel milder. Use direct body contact and allow the pillow time to warm up.

Three ways to use the pillow

The pillow is sold without a power bank, with 10,000 mAh or with 20,000 mAh. Always check the selected version in your order.

Without power bank

Use your own suitable 5V power bank with at least 2A, or the integrated 2.5m cable through USB or a 5V adapter.

10,000 mAh

Compact for cordless use. Expect up to approx. 3.5 hours on high, 5 hours on medium and 6 hours on low.

20,000 mAh

About twice the capacity and therefore, under the same conditions, approximately twice the operating time.

Connect and store the power bank

Open the Chenille cover zipper. Open the hook-and-loop flap on the power bank pocket of the black inner pillow, connect USB-A and place the power bank with part of the cable in the pocket. Close the pocket and zipper without sharply bending the cable.

Use with the long cable

Without a power bank, connect the integrated cable to a suitable USB port or 5V adapter with at least 2A. Route the cable to prevent tripping and never pull on it.

Troubleshooting

Situation	Check and solution
No warmth	Check 5V/minimum 2A, insert USB-A fully, hold the button for 2 to 3 seconds and preheat for 5 to 10 minutes.
Button flashes / pillow switches off	Fully charge the power bank, check the connection and test another suitable 5V supply. Stop after repeated shutdowns.
Outside feels lukewarm	Use the front directly against the body. Chenille fabric softens surface warmth. Do not fold double or cover tightly.
Operating time is short	Charge fully and test on Green. High setting, cold surroundings and an older battery reduce operating time.
USB port or plug gets hot	Switch off and disconnect immediately. Do not reuse the power source and contact Warmpi.
Odour, stains, moisture or damage	Switch off, disconnect and do not use the product again until Warmpi has assessed it.

Safety, care and storage

For Warmpi Chenille 50x30cm heating pillows with two front panels

Page 3 of 3

Stop immediately in case of unusual heat, burning smell, discoloration, moisture, damage or a swollen power bank. Disconnect power and contact Warmpi.

Important safety rules

- For personal warmth and comfort only; this is not a medical device.
- Check the pillow, button, cable, plug and power bank before every use.
- Do not use when the product is wet, damp, damaged or discoloured.
- Do not sharply fold, kink, pierce, crush or use under heavy objects.
- Do not use while sleeping, unattended or in damp surroundings.
- Do not combine with a hot-water bottle, electric blanket or another heat source.
- Children and people with reduced heat sensitivity require continuous supervision.
- For sensitive skin, start on Green and check the skin regularly.
- Do not place the power bank on a heating panel or trap it under body weight.
- Use only a suitable 5V supply with at least 2A; do not use while charging the power bank.
- Keep connections free from dust, liquids and metal objects.
- After use, switch off, disconnect the power and allow the pillow to cool.

Cleaning and storage

- Switch off, disconnect the power and let the pillow cool completely.
- Open the Chenille cover and remove the complete black heated inner pillow and power bank.
- Machine-wash only the separate Chenille outer cover at up to 30 °C on a delicate cycle.
- Never wash or immerse the black heated inner pillow, button, cable or power bank.
- Air-dry the cover completely. Do not bleach, iron or tumble-dry.
- Store dry and roomy, without heavy objects on top or sharp bends in the cable.

Technical information

Product	Warmpi Chenille heating pillow - approx. 50 x 30 cm
Heat	2 front panels - Green approx. 40 °C / Blue approx. 50 °C / Red approx. 60 °C
Power	5V DC - minimum 2A - USB-A
Cable	integrated - approx. 2.5 m
Material	Chenille outer cover with black heated inner pillow and filling
Power bank	optional 10,000 or 20,000 mAh
Use	direct contact warmth, indoor use

Disposal and contact

Do not discard electronics or power banks with household waste. Dispose of them separately according to local rules. Warmpi - Laning 7, 3202 JC Spijkenisse, The Netherlands - info@warmpi.com - warmpi.com.
